PROFILE

Full-stack software engineer with 3+ years of building and shipping production web applications, from React/Next.js interfaces to Node.js, Django and FastAPI back ends. Currently the sole engineer and SEO lead for a German translation agency with 8 offices: I rebuilt its multilingual website (7 languages, 247 indexed-ready URLs) and run its technical and local SEO. Experienced in taking over inherited codebases, fixing security issues, setting up CI/CD and background-job infrastructure, and integrating LLM and vision-AI features (Google Gemini, DeepL, CodeT5) into real products. Co-author of an IEEE Xplore paper; 3rd place, Arab AI Olympiad; ICPC Honorable Mention.

TECHNICAL SKILLS

Frontend	React 18/19, Next.js (App Router), TypeScript, JavaScript (ES2023), Vite, Tailwind CSS, shadcn/ui, Radix UI, Zustand, Framer Motion, GSAP, Three.js, Leaflet, HTML5, CSS3, RTL/i18n
Backend & APIs	Node.js, Express, NestJS, Django & Django REST Framework, FastAPI, REST, GraphQL, Socket.IO, Celery, JWT/OAuth (Google, Apple), NextAuth, Stripe, Paddle, Nodemailer
Databases	PostgreSQL, MongoDB, Firebase (Firestore, Realtime DB, Auth), Prisma ORM, Redis, MySQL
SEO & Web Performance	Technical SEO, build-time prerendering, hreflang & canonical strategy, JSON-LD structured data, XML sitemaps, 301 migrations, Local SEO & Google Business Profile, Google Search Console, Core Web Vitals, GDPR-compliant analytics
AI & Data	Google Gemini (Vertex AI), DeepL API, OpenRouter, Hugging Face, LLM tool calling & prompt design, CodeT5, YOLOv8, OpenCV, rembg, Pandas, data cleaning pipelines
DevOps & Tools	Docker & Docker Compose, GitHub Actions CI/CD, Vercel, AWS (EC2, S3), Git, Linux, Postman, Swagger/OpenAPI
Languages	JavaScript, TypeScript, Python, Dart, C++, SQL

PROFESSIONAL EXPERIENCE

Full-Stack Developer & Technical SEO Lead (Freelance)
May 2026 – Present

Noon Dolmetscher & Übersetzungsbüro — *Germany · Remote*

Live: noon-sprachdienst.de · **Stack:** React 18, Vite, Vercel Functions, Node.js, Firebase/Firestore, Nodemailer, Leaflet, Three.js

- Sole engineer for a sworn-translation and interpreting agency with 8 offices in Germany. Rebuilt its website from Squarespace/Wix as a React + Vite app with serverless APIs (~16K lines), owning UI/UX, development, deployment and a 20-document technical handover.
- Built a **multilingual SEO architecture**: 7 languages (incl. Arabic RTL), build-time prerendering of every route to static HTML with unique titles, meta, canonical, hreflang/x-default and JSON-LD (LocalBusiness, FAQPage, BreadcrumbList, OfferCatalog), a 247-URL sitemap and an automated SEO audit on each build.
- Led **local SEO**: office pages with unique copy, FAQs and maps, 19 service-area city pages, and intent-driven language, document and court-interpreter landing pages; unified NAP data and linked all 8 Google Business Profiles.
- Migrated with 301 redirects for all legacy URLs, fixed canonical, trailing-slash and soft-404 issues, and passed Search Console validation for 251 "Discovered – not indexed" pages; monitor 110K+ Google impressions per quarter.
- Built the back end: a rate-limited quote form with file attachments over Google Workspace SMTP, and GDPR-compliant, consent-based analytics on Firestore with daily aggregates and a protected admin dashboard.
- Automated bi-weekly German/Arabic SEO reports from Search Console and Google Business Profile data (Python + headless Chrome).

Backend Software Engineer
Feb 2026 – May 2026

RaySoftware Development — *Saudi Arabia · Remote*

Product: MyDressr, an AI fashion app (mydressr.com) · **Stack:** Django REST Framework, PostgreSQL, Celery, Redis, Docker, Google Gemini, Stripe, AWS S3

- Took over an inherited Django back end (100+ REST endpoints) and fixed 37 issues, including critical bugs silently breaking background tasks, AI features and the website.
- Closed security gaps: removed a Firebase service-account key committed to git, moved hardcoded OAuth secrets to environment config, enforced HTTPS for email.
- Rebuilt infrastructure for faster uploads and suggestions: Celery, Celery Beat and Redis in Docker Compose, a production-matching PostgreSQL setup, and GitHub Actions CI/CD (migrations + tests on Postgres/Redis, images to GHCR).
- Built AI features on Google Gemini: avatar generation with face validation, clothing recognition with background removal (rembg, OpenCV), outfit suggestions, a wardrobe-aware stylist chat and async virtual try-on.
- Designed new endpoints (weather-based trip planner, outfit share/plan/favourite, Google Shopping search) and integrated Google/Apple sign-in, OTP reset, Stripe subscriptions and FCM push.
- Wrote the API reference for the Flutter team; cut the landing page's 44 MB GIF banner to a 1.4 MB video.

Data Engineer **2025 – 2026**
Souq Algomlah *Kuwait · Remote*

- Built Python pipelines that collect vendor catalogues from external APIs and spreadsheets, then clean, de-duplicate and map them to marketplace categories for bulk import.
- Delivered 1,000+ structured product records (grocery, pharmacy, pet, restaurants) with bilingual Arabic/English names, SEO-friendly descriptions, prices and images.

Robotics & Programming Instructor **2022 – Present**
Pyramakerz · Techno Future Academy · Future Kids *Alexandria, Egypt*

- Taught programming, web development, Arduino and robotics to 1,000+ students; certified FIRST LEGO League and LTU coach.

SELECTED PROJECTS

WebCraft — *SaaS block-based website builder · Team Lead & Full-Stack Developer* **2025 – 2026**
Live: web-craft-f.vercel.app · **Stack:** Next.js, TypeScript, Tailwind, Google Blockly, Express, Prisma, NextAuth, Firebase, Monaco Editor, Paddle, CodeT5

- Led the team building a Scratch-style editor whose custom Blockly blocks generate real HTML/CSS/JS and Express code, with live Monaco code view, desktop/mobile preview and one-click GitHub Pages deployment (live in 4.36 s).
- Added a CodeT5 AI commenter that explains the code (65% acceptance, 89.9% utility-class coverage over 99 tests), plus auth, cloud storage, payments, admin dashboard and Arabic RTL.

DocuLingo — *AI certified-translation platform for translation offices (built for NOON)* **2026**
Stack: FastAPI, Python, React + TypeScript, Google Gemini on Vertex AI (EU), DeepL API, Docker, Caddy

- Turns scans, photos, PDFs and Word files into drafts in the office's certified-translation template (Word + PDF): a vision model reads tables, stamps and handwriting, numbers are double-checked, DeepL translates with domain glossaries.
- Multi-tenant SaaS: organisations and teams, per-office templates, admin dashboard, EU-only processing with auto-deletion, AI spending cap, and a benchmark scored against real office translations.

Rehab Center Management System — *ERP for a therapy center* **2026**
Live: rehabilitation-center-for-special-n.vercel.app · **Stack:** React, TypeScript, Vite, Tailwind, Firebase, Recharts

- HR and finance system: attendance with automatic overtime, monthly payroll with salary advances and partial payments, petty cash, revenue/expense ledgers, a KPI dashboard, role-based Firestore security rules and Arabic Excel export.

Tech Pharos Competition Portal — *for the IEEE Student Branch, Pharos University* **2026**
Live: ieee-pua-cs-ai.vercel.app · **Stack:** React, TypeScript, Tailwind, Firebase Realtime Database

- Team registration for Web, AI and Robotics tracks with per-track team-size rules, live fee calculation by membership type, duplicate checks, and a real-time organiser dashboard with payment status and Excel export.

More Projects — *AI tooling, back end and computer vision* **2024 – 2026**

- **Agent Editor** (React 19, TypeScript, Zustand, Node.js): local-first workbench for building AI agents with streaming chat (OpenRouter, Hugging Face) and a tool-calling coding agent that edits files in a user-selected workspace.
- **AI Platform Orchestrator** (FastAPI, Pydantic): routes requests to local LLMs (Ollama/vLLM) and cloud connectors via a model registry with health checks and token limits. github.com/3assem0/ai-platform-orchestrator
- **Job Finder App**: Node.js, GraphQL and Socket.IO job board with real-time updates. github.com/3assem0/job-Finder-App
- **Social App / Saraha App**: Node.js, Express, MongoDB REST APIs. github.com/3assem0/SocialApp
- **Indoor Object Detection**: YOLOv8 + Streamlit for images, video and live camera. github.com/3assem0/ML-CV

PUBLICATION

Design and Implementation of an AI Agent-Driven Block-Based Platform for Full-Stack Web Development in STEAM Education, co-author. 4th International Conference on Intelligent Methods, Systems and Applications (IMSA 2026), Jul 2026. IEEE Xplore: ieeexplore.ieee.org/document/11700248

EDUCATION

B.Sc. Computer Science & Artificial Intelligence
Pharos University in Alexandria, Egypt · 2022 – 2026

AWARDS & CERTIFICATIONS

- 3rd Place, Arab Olympiad for Artificial Intelligence (Egypt, 2023)
- Honorable Mention, ICPC (Aug 2023)
- Full-Stack Web Development Diploma, Route IT Training Center (2024 – 2025)
- InnovEgypt Entrepreneurship Program; The Open University: Managing Complexity, Software Development, UI Design (2023)

LEADERSHIP & COMMUNITY

- Head of Academic Web Development Track, IEEE PUA & Hult Prize PUA (2025 – 2026); taught JavaScript and back-end workshops
- Webmaster, IEEE RAS PUA (2026)
- Head of Frontend & Backend Tracks, Dream Team (2024 – 2025)

LANGUAGES

Arabic (native) · English (professional working proficiency)
